DESIGNED & DEVELOPED BY

# Mo-fiD® THE NEXT WAVE OF DIABETES MANAGEMENT PLATFORM FOR MIDDLE EAST AND GULF STATES' PATIENTS

## BE M-HEALTHY. CONNECT.™

Mo-fiD® is an integrated smart mobile application and web based portal that captures your blood glucose readings, diet and daily activities for better management of your diabetes using your smart phone and glucose meter.

Mo-fiD® is the world's first mobile diabetes monitoring and self-management platform developed and tailored for the clinical needs and cultural norms of Middle East and Gulf region diabetes patients in both Arabic and English languages. Mo-fiD® integrates state-of-the-art communications and smart computing technologies into a personalised diabetes monitoring and self-management system.

Mo-fiD® captures seamlessly patient's daily blood glucose readings and analyzes patient's lifestyle, diet and medication adherence using the patient's own personal Android or iOS smart phones and most commonly used blood glucose meters in Middle East Region.

## Mo-fiD® LOW POWER BLUETOOTH ACCESSORY DEVICE AND MOBILE APPLICATION

Mo-fiD® Low Power Bluetooth Accessory Device is a new compact and discreet state-of-the-art reconfigurable low power wireless adaptor. The Device seamlessly reads and transmits the blood glucose data from a variety of market glucose meters\* and transmits the data to patient's own smart phone or tablet using the myMo-fiD® App.

myMo-fiD® App is an easy to use Android/iOS based application. It is designed to provide all the information the patient needs for self-management including blood glucose, food and water intake, activities performed and much more. It generates alarms, notifications and warnings when the blood glucose goes lower or higher than the normal range. It is specially customised for Middle Eastern patients to take care of their health during Ramadan fasting month, Hajj and Umrah.

# Mo-fiD® POD

The Mo-fiD® POD is a secure supplementary web portal developed for Mo-fiD®'s patients and synchronised with myMo-fiD® App and accessory device via secure cloud internet and smart phone connectivity. It automatically updates the captured glucose reading and allows the Mo-fiD® users to track and view their blood glucose readings and correlate with food intake and activities performed during the day.

The Mo-fiD® POD includes personalised information on medications, appointments and messages from the healthcare provider besides other features for easy and illustrative graphical patterns and presentations that assist and educate the patients in their monitoring and management therapy. It allows for example smart alerting for any potential acute hypoglycaemia, low insulin intake levels and medication intake gaps. Mo-fiD® POD is synchronized seamlessly with myMo-fiD® App anytime and anywhere.

# Mo-fiD® CLINICALBOOTH

Mo-fiD® ClinicalBooth is a secure cloud based diabetes management system and Electronic Patient Record developed for healthcare providers to empower the clinicians with complementary care insight of their diabetic patients' care and management process using the Mo-fiD® system. The Mo-fiD® ClinicalBooth provides the information and assessment of the patient's data for better clinical outcomes by enabling the Mo-fiD® technology to achieve the patient's glycaemic targets and therapy. The ClinicalBooth also assists the clinicians in making more informed decisions with minimised risks of any adverse complications with better care outcomes and less hospital admissions.

We have designed and developed the Mo-fiD® ClinicalBooth based on the latest published clinical ADA standards on diabetes clinical care procedures. We strive to provide a system that supports the clinicians for better healthcare and management of their patient's condition, allowing better overseeing, prioritising and making informed decisions on their critical therapy and optimise their care pathway.
